

MDXi's Open Connect facilitates increased interconnection, collaboration and peering for customers within its data center. The service enables collocated customers easily inter-connect with carriers, internet service providers, business partners, cloud and content providers while significantly reducing the cost of connectivity in an open access, carrier neutral environment.

### Open Connect Portfolio

- **Optical Cross Connect:** Fiber connection between pre-cabled customer patch panel and another collocated entity's patch panel in the data center meet me rooms.
- **Metro Connect:** Connection between a collocated customer and another party in a separate geographical location.
- **Dedicated Patch Panel:** Pre-cabled patch panel dedicated to customer hosting space to enable bulk optical or metro cross connects.
- **Direct Connect:** Fiber connection between customer patch panel and operators with fiber presence at Datacenter in meet me room.

### Business Benefits

- **Enhanced Network Performance:** Low latency, fast application performance and reliability achieved via direct physical connections to service providers, content and business partners.
- **Cost Savings:** Direct access to multiple networks thereby providing competitive pricing options.
- **Wide Reach:** Direct connections to multiple networks, carriers, submarine cables, local, regional and international internet exchanges.

### About MDXi

MDXi is a MainOne company that operates Lekki Data Center, West Africa's largest purpose built brick and mortar Tier III certified Data Center. The facility was built with flexibility in mind to meet diverse customer collocation requirements and is currently the only commercial Data Center in Nigeria certified to PCI-DSS, ISO27001 and ISO9001 standards.
